EDUCATION

Lokmanya Tilak College of Engineering, Navi Mumbai
Bachelor of Engineering in Computer Science (IoT and Cyber Security)

July 2023 - May 2027
CGPA: 9.48

TECHNICAL SKILL

Languages: C, SQL, JavaScript, Java, Python

Databases: MongoDB, MySQL, PostgreSQL

Tools & Technology: Node.js, Express.js, React.js, Postman, Git (Version Control Systems)

Coursework: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, DBMS

PROJECT

SHEild – Blockchain Secured Women Safety App

[GitHub](#) - [Live Demo](#)

- Developed an AI + **Blockchain-based women safety app** with SOS alerts, real-time tracking, and evidence recording.
- Integrated **Twilio SMS, Cloudinary, and Polygon blockchain** for secure and automated emergency response.
- Implemented **ML-based risk prediction system** for real-time safety assessment.

AI Trip Planar

[GitHub](#) - [Live Demo](#)

- Built an AI-based travel planner generating personalized itineraries based on user input (budget, duration, trip type).
- *Integrated Google **Gemini API, Firebase, and live maps** for real-time recommendations and storage.*
- Developed with **React Vite** and deployed on **Vercel** and **Render** for cross-platform scalability.

Agri AI Project (Python, Flask, ML Models, APIs)

[GitHub](#) – [Live Demo](#)

- Built an intelligent platform that assists farmers with **crop recommendations, weather forecasts, market price predictions, and government scheme updates.**
- Added **voice assistance** for better accessibility to rural users.
- Improved decision-making for farmers by combining agriculture + AI in a single solution.
- Collaborated with cross-functional teams to design and deliver robust, maintainable backend solutions.

Automatic LPG Gas Detection System (IoT, Embedded C, Sensors, Arduino)

- Engineered a safety prototype that **detects gas leakage** and automatically cuts off electricity while turning on the exhaust fan.
- Programmed sensor-based detection using **Arduino microcontroller** for real-time response.
- Designed with household safety in mind, reducing the risk of accidents due to gas leakage.

FlexFit – Home Workout & Diet Recommendation System

[GitHub](#) – [Live Demo](#)

- Built a personalized fitness platform suggesting **home workouts** and **diet plans** based on user profile.
- Implemented **Flask backend + MySQL database** for user data and recommendations.
- Designed a clean, engaging frontend with **HTML, CSS, JavaScript.**

CODING PROFILES

- **Codeforces:** Active participant, currently practicing to improve rating
- **CodeChef:** Focusing on problem-solving and algorithmic challenges
- **LeetCode:** Working on data structures, algorithms, and interview preparation

ACHIVEMENT

- Selected among the top teams in **Smart India Hackathon (SIH)** at college level.
- **AI Odyssey Hackathon** – Secured **3rd place** among multiple teams by developing an AI-driven solution, showcasing innovation, teamwork, and problem-solving skills.
- Ranked among the Top 5 teams in the 24-hour **HackStrom Hackathon** conducted in Jaipur, showcasing rapid prototyping and problem-solving under time constraints.
